

Getting to know the Internet of Things

BRIAN SUDA

(optional.is)

The term “Internet of Things” was coined by Kevin Ashton executive director of the Auto-ID Center:

"I could be wrong, but I'm fairly sure the phrase "Internet of Things" started life as the title of a presentation I made at Procter & Gamble (P&G) in 1999. Linking the new idea of RFID in P&G's supply chain to the then-red-hot topic of the Internet was more than just a good way to get executive attention. It summed up an important insight which is still often misunderstood."

Smart Toaster

People just love to make fun of Smart Toaster. My favorite was the tweet, “I don’t think my smart toaster needs apps”.

You can’t evaluate tomorrow’s concepts by yesterday’s tasks! Of course a smart toaster doesn’t need apps. A horse doesn’t need wheels either. We just need to look at what smart means in a more nuanced way. ... If I can unpack what it means to be smart, so that even a lowly toaster starts to make sense, we’ll be thinking about the IoT in a much broader context.
